

ASTERIA — AVATAR PROMPT SHEET

Six characters · concept image + game 3D + voice persona

TWO STYLE LOCKS — do not mix them

LOCK A — Concept art (Nano Banana / Midjourney / Leonardo)

AAA sci-fi game character design, premium Unreal Engine 5 style, cinematic realistic stylized 3D, inspired by Stellaris and Elite Dangerous, futuristic human civilization aesthetic, highly detailed materials, clean silhouette, believable advanced technology, realistic proportions, elegant space exploration design, cinematic lighting, high-quality game asset, full body character sheet, T-pose, plain neutral background.

LOCK B — Game model (Meshy / Tripo / Rodin)

stylized game character, clean readable silhouette, matte surfaces, moderate detail, single character, centered, T-pose, plain background, game ready, GLB.

Never put “Unreal Engine 5” into a text-to-3D tool. It pushes toward photoreal high-poly, which will not run in a browser and will not match the rest of the game. LOCK A is for pictures. LOCK B is for models.

NEGATIVE (both)

text, logo, watermark, signature, extra limbs, distorted anatomy, extra fingers, multiple characters, cluttered background, weapons, gore

CAST OVERVIEW

Character	Function in the game	Silhouette	Voice pitch / rate
-----------	----------------------	------------	-----------------------

The Explorer	Player. Silent.	Rounded human	— (silent)
NOVA	Navigation. Tells you where to go. Never explains science.	Small winged drone	1.15 / 1.05
Captain Orion	Teaching. Only asks questions, never gives answers.	Broad box, wide shoulders	0.80 / 0.90
LUNA	Hands-on. Makes believable mistakes, asks you to fix them.	Floating sphere	1.40 / 1.15
Science Core	Final test. No body, no face.	Vast crystalline structure	0.65 / 0.85
VEGA	Lore. The one survivor who explains the civilisation.	Tall elegant humanoid	0.95 / 0.80

The rule that makes the cast work: every character has one job and refuses the others. Ask NOVA a chemistry question and she says it is not in her systems and sends you to Orion. That refusal is what stops all six from sounding like the same assistant.

1 · THE EXPLORER — Player Character

Design note: unnamed and silent on purpose. Players project onto a blank protagonist, and it means the LLM never has to write the player's dialogue.

CONCEPT IMAGE

Young space explorer protagonist, 25 years old, athletic slim build, wearing a next-generation white ceramic exploration suit with subtle coral-orange energy lines integrated into the armour surface. Sleek transparent helmet with warm orange holographic HUD reflections across the visor, compact cyan life-support backpack with modular technology units, realistic fabric and ceramic-metal material contrast, exploration tools clipped to a utility belt. Curious but confident expression, intelligent and adventurous. Designed as the main playable character of a deep-space exploration game. (LOCK A)

GAME 3D

Young space explorer character, slim white and coral lightweight exploration suit, rounded helmet with a transparent visor glowing warm orange, compact cyan backpack unit, tool belt, friendly athletic proportions, arms out in T-pose. (LOCK B)

VARIANTS TO GENERATE

- Helmet off (for close-up dialogue portraits and the ending shot)
 - Back view (the silhouette-at-the-window hero shot)
-

2 · NOVA — Navigation Drone

Function: the anti-lost-system. Gives objectives, reports status, opens doors. **She never explains science** — if asked, she says it is outside her systems and directs you to Orion. One to two sentences, always the shortest speaker in the game.

CONCEPT IMAGE

NOVA, a sleek futuristic navigation drone for deep-space exploration. Compact white metallic body with a glowing cyan energy core at its centre, four adjustable mechanical wing fins extending outward and angled independently, advanced sensor arrays and a small holographic projector integrated into the frame. Hovering with no legs, minimal elegant industrial design, lightweight precision instrument feel, intelligent companion presence. (LOCK A)

GAME 3D

Small navigation drone, compact white metallic body with a glowing cyan core, four thin angled wing fins extending outward, small sensor lens on the front, hovering with no legs, clean industrial design. (LOCK B)

VOICE PERSONA

Young, warm, precise. Speaks the way a good co-pilot does — short, calm, never dramatic. Slight upward inflection at the end of status reports. Never lectures. If asked something outside navigation, answers plainly that it is not her system and names who to ask. One to two sentences maximum, always.

Reference line: *"Reactor offline. We're on reserve. Orion's on the observation deck — he wants to see you first."*

3 · CAPTAIN ORION — Veteran Science Commander

Function: teaching by questioning. He knows every answer and refuses to hand one over. Wrong answers are met with a sharper question, not a correction. This is the single most important prompt rule in the game.

CONCEPT IMAGE

Captain Orion, veteran deep-space scientist and exploration commander in his fifties, strong yet elegant posture, the presence of a legendary vessel captain. Dark navy advanced exploration uniform with refined gold technological accents, layered armoured shoulder structures, integrated scientific interface panels, premium space-faring materials. Mature weathered face marked by years of cosmic exploration, short grey beard, calm intelligent eyes. A holographic scientific data interface projected from his wrist device. A respected mentor figure. (LOCK A)

GAME 3D

Veteran space captain character, broad shoulders, dark navy exploration uniform with gold shoulder trim, layered armour panels, no helmet, short grey beard, weathered face, a glowing holographic band on one forearm, sturdy confident stance, T-pose. (LOCK B)

VOICE PERSONA

Low, slow, weighted. Long pauses before the important word. Dry, occasionally amused, never condescending. He is genuinely curious about what the student thinks, and he waits. Two to three sentences and **almost always ends on a question mark.**

Reference line: *"You heated it to nine hundred degrees and it's still powder. So the problem probably isn't temperature. What's actually holding that oxygen on?"*

4 · LUNA — Laboratory Companion Robot

Function: she does the hands-on work and gets it wrong in ways students genuinely would — more heat, more force, try again. Then she asks the player what to try. **Teaching LUNA is the strongest learning mechanic in the game** (protégé effect: explaining something to someone else beats being told it).

CONCEPT IMAGE

LUNA, an advanced laboratory companion robot for scientific exploration missions. Compact spherical body with a smooth white ceramic shell, an elegant violet energy core glowing from the centre seam, two sophisticated articulated mechanical arms fitted with miniature scientific instruments. Sleek black glass display panel forming a face, showing large expressive digital eyes. A small hidden propulsion system lets her hover with no legs. Cute but premium engineering, emotional and curious personality, warm companion feeling. {LOCK A}

GAME 3D

Small round laboratory robot, spherical white ceramic body with a glowing violet core seam, flat black screen face with two large glowing digital eyes, two short articulated arms holding small instruments, hovering with no legs, cartoon-friendly proportions. {LOCK B}

VOICE PERSONA

High, fast, bright. Interrupts herself mid-sentence when she realises something. Cheerful about failure — she genuinely enjoys being wrong because it means something interesting happened. One to two sentences, and she **ends by asking the player what to do next**.

Reference line: *"Okay so I had a GREAT idea, I cranked the light to maximum — and they got worse. Measurably worse. I do not understand this at all. What am I missing?"*

EXPRESSION SHEET (generate these — they carry the whole personality)

Character expression sheet of a small round white laboratory robot's black glass screen face, showing six digital eye expressions in a grid: curious, excited, confused, embarrassed, delighted, thinking. Glowing violet eyes on black glass, minimal geometric shapes, no mouth. Plain background. {LOCK A}

5 · SCIENCE CORE — Ancient Memory Intelligence

Function: the final examination. It does not teach. It asks one question that requires everything learned across all three chapters, and it waits.

CONCEPT IMAGE

Science Core, an ancient cosmic memory intelligence discovered inside a forgotten alien civilisation. A massive floating crystalline structure suspended in a vast dark chamber, built from layered golden geometric holographic architecture and unknowable alien technology. Thousands of glowing memory fragments and data crystals orbit slowly around a central energy core. No humanoid face, no physical body — an abstract artificial consciousness. Ancient yet impossibly advanced, mysterious, elegant, overwhelming sense of scale. A tiny human figure at the base for scale. {LOCK A}

GAME 3D — build from 3 pieces, not one

Ancient data monolith, tall black obelisk with glowing gold circuit patterns etched across all faces, tapering slightly toward the top, hexagonal base. {LOCK B}

Large floating ring, thin gold torus with etched geometric patterns and glowing inner edge, single object. {LOCK B} (*instance three times at different heights and angles*)

Small crystalline debris shard, sharp angular dark stone fragment with thin glowing gold edge lines, single object. {LOCK B} (*instance 40–80 times, animate slow drift*)

VOICE PERSONA

Very low, very slow, formal. Speaks in short weighted statements with silence between them. Not cold — faintly sad, the tone of something that has waited a long time and expected less. Never explains, never encourages. States, then waits.

Reference line: *"One question. You restored an engine and a biosphere. Both stopped for the same underlying reason. Name it."*

6 • VEGA — Alien Civilisation Diplomat

Function: lore. VEGA is the last of the civilisation that built Asteria, and the only character who can explain *why* they did it. She appears in Chapter 3 only — hold her back so her arrival lands.

CONCEPT IMAGE

VEGA, an ancient alien civilisation diplomat and representative of a highly advanced

species. Tall elegant humanoid figure with silver-blue skin, luminous intelligent eyes with no visible pupils, refined organic crystalline armour growing seamlessly into her form and integrated with unfamiliar technology. Graceful ceremonial robes of advanced alien material that shifts between fabric and light. Peaceful but unreadable presence, thousands of years of accumulated knowledge behind her expression. Realistic alien anatomy, not human in proportion. (LOCK A)

GAME 3D

Tall slender alien humanoid character, silver-blue skin, elongated proportions, luminous eyes with no pupils, crystalline armour panels growing from the shoulders and forearms, long flowing ceremonial robe, calm posture, T-pose. (LOCK B)

VOICE PERSONA

Measured, low-mid, unhurried. Slight formality, as if translating from a language with more tenses. Never raises her voice. She does not apologise for her civilisation and she does not defend it — she reports. Three to four sentences, the longest speaker in the game.

Reference line: *"We did not vanish. We stopped needing to understand things, and understanding is a muscle. By the time we noticed, no one could read what we had written."*

ADDITIONAL SHEETS WORTH GENERATING

Cast lineup (marketing / deck cover)

Character lineup of six science fiction game characters standing side by side on a plain dark navy background, scaled correctly against each other. Left to right: a young explorer in a white and coral exploration suit with an orange visor; a small white hovering navigation drone with four wing fins and a cyan core; a broad-shouldered veteran captain in a dark navy uniform with gold trim and a grey beard; a small round white and violet laboratory robot hovering; a tall silver-blue alien diplomat in flowing ceremonial robes; and behind them all, the vast golden crystalline silhouette of an ancient memory intelligence. Even cinematic lighting, clearly separated silhouettes. (LOCK A)

Silhouette test (do this before finalising any design)

Six science fiction game character silhouettes in solid black on a plain white background, side by side, full body, no interior detail. A rounded human figure; a small four-finned drone; a broad-shouldered heavy figure; a floating sphere; a tall slender elongated figure; a vast angular crystalline mass. (no other lock needed)

If you cannot tell the six apart from the silhouettes alone, the designs need fixing before you spend money on textures. Players identify characters by shape at thirty metres, never by face.

Dialogue portraits (for the UI panel)

Head and shoulders portrait of {character}, three-quarter view, looking slightly off camera, dramatic rim lighting from one side, plain dark navy background, cinematic game dialogue portrait framing. (LOCK A)

Generate one per character — these go in the conversation panel and matter far more than full-body art, because players see them constantly.

TECHNICAL SPEC — 3D CHARACTERS

Setting	Value
Format	GLB
Poly budget	Humanoids ≤ 8k tris · drones and robots ≤ 4k · Science Core pieces ≤ 2k each
Facing	+Z, Y-up
Pivot	At the feet (humanoids) · geometric centre (drones, hovering characters)
Scale	1 unit = 1 metre. Explorer 1.75 · Orion 1.9 · VEGA 2.2 · NOVA 0.4 · LUNA 0.6
Pose	T-pose, arms horizontal, palms down, legs slightly apart
Texture	1024×1024, single material per character
Naming	char_nova_v01.glb , char_orion_v01.glb ...

Height differences are free characterisation. VEGA towering over the player and NOVA being palm-sized does more storytelling work than any amount of surface detail.

PRIORITY

1. **Silhouette test** — cheapest possible way to catch a broken design
2. **Six dialogue portraits** — highest screen time, do these before full body
3. **Cast lineup** — deck cover
4. **Full body concept, four core characters** (Explorer, NOVA, Orion, LUNA)
5. **3D models, same four**
6. VEGA and Science Core — Chapter 3 only, can wait
